

# Lung Diseases List

**T**he **lungs** are one of the most important organs of our body. It helps in the process of respiration and as well as heart it performs the purification of blood via supply of oxygen. Virtually any problem with the lungs may result in life-threatening consequences. Air is actually inhaled in the body through the nostrils which is directly acquired from the lungs. This unearths the lungs to a lot of infections and illnesses that if not taken care in time may even lead to death. So, keep a note of the list of lung illnesses and also try to protect yourself from buying them.

- Bronchitis: In the event of bronchitis, the air passage from the windpipe to the lungs will get inflamed.
- Smokers are more likely to suffer from this condition.
- Chronic **bronchitis** can lead to chronic obstructive pulmonary disease (COPD).
- Patients of chronic bronchitis possess **cough** for decades.
- Inflammation of the wind pipe to the lungs contributes to extreme soreness.
- The actual mucus is heavy, yellow, and greenish.

Congested nasal area and torso with moderate mucous and a runny nose may not be dangerous. However, symptoms just like sore throat, fever, soreness, yellow or green mucous, diarrhea, nausea, and so on., could signal an actual issue like flu.

## Major DiseasesOther DiseaseLung Condition Symptoms as Well as Treatments

The symptoms of the lung diseases completely is determined by its sort. The signs and symptoms may also vary from person to person as the weight power of your body also matters. Cough, shortness of breath, coughing, exhaustion, chills, shaking, multiplied heart beat, and so on., are some of the most common symptoms. Chronic lung disease may lead to blood throughout coughing, inability to be able to breathe, torso pain, and so on. These signs can be treated as soon as possible to avoid complications.

## Treatment Will Also Rely on the Type of Illness

Antibiotics, supplemental vitamins, pain relievers, inhalers, and so forth., are some of the common treatments. In the event of severe condition non-invasive positive pressure ventilation (NIV), chest physiotherapy, supplemental oxygen therapy, and so on., may be given. Lung diseases caused by smoking like emphysema and asthma, can be treated only when the person stops cigarette smoking.

- At times, pressure might increase to such an extent that it might lead to cardiovascular dysfunction.
- That is medically referred to as tension pneumothorax.
- If unattended, it could even lead to death.
